

Four Macromolecules that work together in cells:

| <b>Macromolecule:</b> | <b>What do they do?</b> | <b>Where are they found?</b> | <b>Types:</b> | <b>Made up of:</b> | <b>At the atomic level:</b> | <b>Picture:</b> |
|-----------------------|-------------------------|------------------------------|---------------|--------------------|-----------------------------|-----------------|
| Carbohydrates         |                         |                              |               |                    |                             |                 |
| Lipids                |                         |                              |               |                    |                             |                 |
| Proteins              |                         |                              |               |                    |                             |                 |
| Nucleic Acids         |                         |                              |               |                    |                             |                 |
